

Secure Document Transformation — Decision Memo

Tests: requirements, budget arithmetic, risk tables, executive summary and presentation generation.

Decision Requested

Approve a 12-month controlled rollout of an internal document-transformation platform for approved reports, producing executive summaries, briefings, advisories, presentation content and publication drafts.

Objectives

Objective	Measure	Target
Reduce analyst drafting time	Median briefing time	45% reduction
Improve traceability	Claims with source references	≥95%
Reduce unsupported statements	Verified-output rate	≥98%
Increase reuse	Outputs from one source	≥4 types

Operating Constraints

Restricted-or-higher material must remain inside approved infrastructure. Material claims require source references. Human review is required before external publication. Version history and approval actions must be retained.

Budget Envelope

Workstream	Year-1 Budget
Platform engineering	\$480,000
Security and governance	\$210,000
Storage and compute	\$160,000
Training and adoption	\$90,000
Contingency	\$60,000
Total	\$1,000,000

Risk Register

Risk	Likelihood	Impact	Mitigation
Hallucinated claim	Medium	High	Claim-level verification + review
Prompt injection in source	Medium	High	Treat source text as untrusted data
Sensitive-data leakage	Low	Critical	On-prem processing + RBAC
Low user adoption	Medium	Medium	Pilot + training

Success Criterion

Time savings must be achieved without reducing factual accuracy, auditability, or publication controls.
